Agency CDPHE

Purpose of Contact Backfill of 500-2 excavation

Discussion

All four of the confirmation samples collected for the remedial action at 500-2 were well below action levels. The highest concentration of was chrome was 47 mg/kg, well below the chromium action level of 268 mg/kg. This value is within the range of the other chromium values for this IHSS group and is similar to the surface background value of 16.99 mg/kg and the subsurface background value of 68 mg/kg. Based on this, the excavation will be backfilled.
